

## PRESTIGE MOLD OPEN HOUSE / SYMPPOSIUM WITH HUSKY INJECTION MOLDING SYSTEMS MANUFACTURABILITY

**January 23rd -27th 2012** – Prestige and Husky combined their leadership in evolving technologies to present an Open House / Symposium for existing and prospective customers. We want to thank everyone for the overwhelming response! Twenty six different companies attended this event with many sending personnel from multiple facilities.

Prestige shared with everyone our planned commitment to be here to support them now and long into the future with a second generation of the Koebel family already making their mark on the company. We plan on being here for our customers twenty years from now and are integrating the most advanced technologies available today and evolving them for our customer's future needs.

Attendees were taken on a tour of our ultra-modern facility and given demonstrations of next generation production and robotics combined with proprietary software and technologies. Our vision for the future was shared with everyone to reinforce our dedication to not only constant improvement, but constant re-invention of our capabilities. One of the highlights of the tour was the presentation of our new 18,000 sq. ft. Molding Technologies Center; Pres-Tek Plastics located next door to our production facility. Currently under construction this class 100,000 clean room facility will be used for turnkey production systems, mold qualification and validation, production molding for current tooling customers, and development of new molding capabilities with our polymer development partners.

Husky shared presentations on their new Ultra SideGate and UltraSync Valve Gate Systems; followed by a visit to our current molding facility for attendees to watch the Ultra SideGate in action. Extremely fast shut down, component changeover, and start-up was demonstrated along with the running of several different materials; all producing incredible gating results and process windows. Attendees loved the simplicity of the system and the results that were produced.

**"Everyone commented on the facility and ultra-modern equipment, along with Prestige's ability and desire to continuously take technology and service to the next level, it was impressive ....."**

John Taylor, BBraun Medical
